

**Cantimer to Present at yet2.com's Executive Briefing XI
Thursday, May 19, 2011
Hyatt Regency Cambridge, Cambridge, MA USA**

April 28, 2011 (Menlo Park, CA) – Cantimer (www.cantimer.com) is one of 16 companies selected to present “cutting-edge technologies” at yet2.com’s Boston conference entitled “Open Innovation: Making a Step-Change Impact”, May 17 – 19, 2011, at the Hyatt Regency, Cambridge, MA. Cantimer will present on Thursday, May 19 and will discuss its plans to commercialize its initial product, a portable hydration monitor that measures a person’s hydration level from a drop of saliva in about a minute.

The product is based on Cantimer’s broadly-capable, patented, proprietary sensor technology platform that consists of an iPod-sized device containing a micro-cantilever embedded in a droplet of an analyte-specific sensing polymer. The technology is simple, contains few moving parts, and has applications in a variety of markets including bio-defense, bio-pharma, consumer health, and point-of-care diagnostics.

The first product to monitor hydration levels is being developed with strategic investors Danone Research and Advanced Instruments as well as with grants from the US Department of Defense.
